

A number of years ago I bought a LGB four wheel crane car. After that I bought a Ozark Miniatures winch to place inside the to be modified crane car. I modified the LGB crane car by raising the roof and repaint.

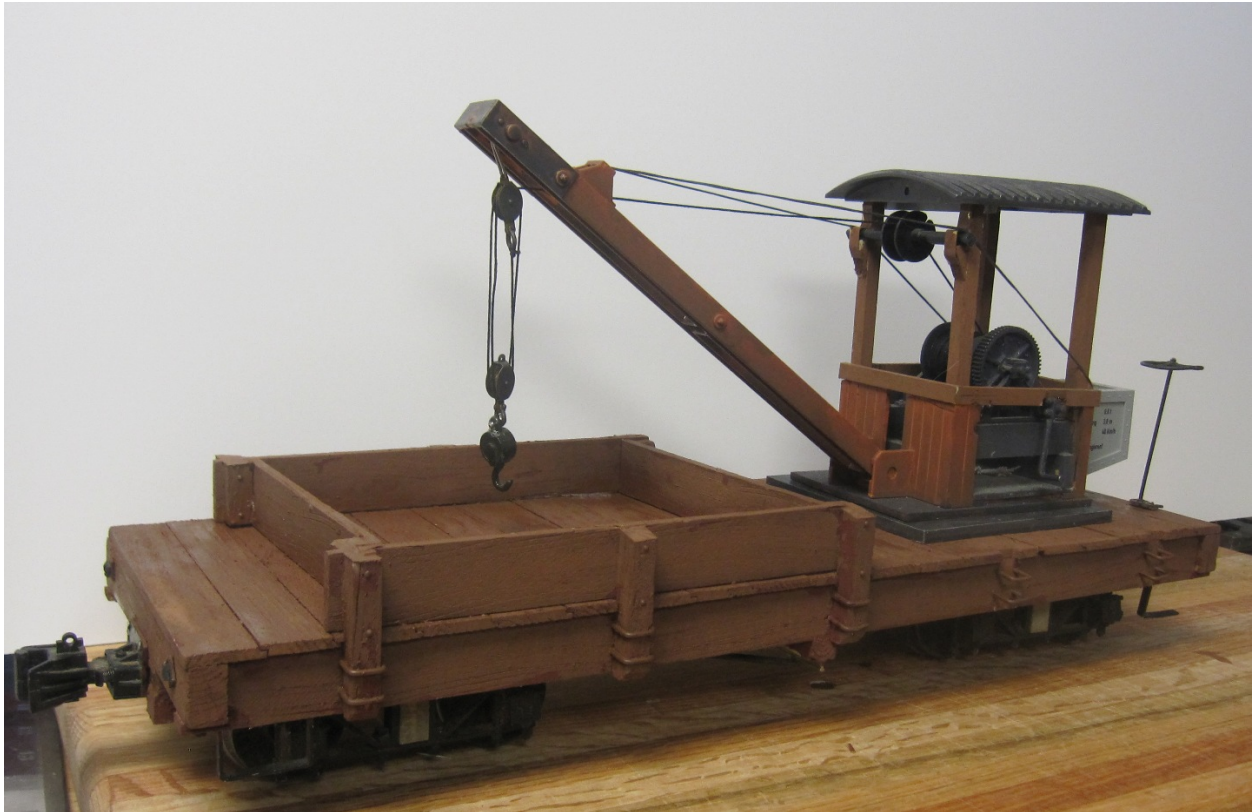

Here is a close up of the winch in the cab. It just fits inside and I built it so it works.

Recently I re-looked at the car and didn't like the proportions of the whole car. I had a winter swap flat car that begged to have a small crane mounted at one end.

Now the car looks more believable.
